Department of Software and IT Engineering

The Development of International Standards Tailored to the Needs of Very Small Entities

Professor Claude Y Laporte, Eng., Ph.D.

Editor, ISO/IEC JTC1 SC7 Working Group 24

Chiang Mai, Thailand

December 9th, 2009

Content

- **Introduction**
- **Needs for Standards for Very Small Entities (VSEs)**
- **Establishment of ISO Working Group 24**
- **Approach used by Working Group 24**
- **Survey of VSEs**
- **Accomplishments to Date**
- **Deployment Packages**
- **Pilot Projects**
- **Network of VSE Support Centers**
- **Next Steps**

VSEs = Very Small Entities are enterprises, projects or departments having up to 25 people

ISO/IEC JTC 1/SC7 = International Organization for Standardization/ International Electrotechnical Commission Joint Technical Committee 1/Sub Committee 7

École de Technologie Supérieure (ETS)

Over 4500 students, 125 professors, 25 general senior lecturers and 200 lecturers.

About 2000 paid industrial internships in over 900 companies each year (about 10,000$ per internship)

Undergraduate Programs
- Software Engineering
- IT Engineering
- Construction Engineering
- Production Engineering
- Electrical Engineering
- Mechanical Engineering
- Logistics and Operations Engineering

> - 700 students
> - 17 Professors in the department have a mean industrial experience of 15 years.

- Graduate Programs
  - Software Engineering
  - Information Technology
  - Other programs

> 150 students.

Department of Software and IT Engineering

3

History of Working Group 24

- **SC7 Plenary Meeting - Australia – 2004**
  - Canada raised the fact that small enterprises require standards adapted to their size and maturity
  - Establishment of a Special Interest Group
- **Two Workshops - Thailand – 2005**
  - Sponsored by the Thai Industrial Standard Institute and the Thai Software Industry Promotion Agency,
  - Representatives
    - Australia, Belgium, Brazil, Canada, Czechoslovakia, Finland, South Africa, South Korea, USA and Thailand.
- **SC7 Plenary Meeting - 2005 – Finland.**
  - Proposal to establish a new Working Group (WG) was tabled
  - Twelve countries offered their support to staff WG 24
- **WG 24 Meetings**
  - Italy (2005), Thailand - Luxembourg (2006), Russia – Canada (2007), Germany – Mexico (2008), India - Peru (2009), Japan - USA (2010), 2011 (France).

The Importance of VSEs
An Example from Japan

Manufacturer

Prime (60)

Suppliers (600)
Producers (~6,000)

A software defect from one of the producers went into a product and resulted in a loss of over \$200 million by the manufacturer

Very Small Entities (VSEs): enterprises, departments, or projects having up to 25 people.

Shintani, Small Settings Workshop, Software Engineering Institute, 2005

Size of Enterprises

- **European Union**
  - 93 % are micro enterprises (less than 10 employees)
- **Micro enterprises account for 70 % to 90 % of enterprises in OECD* countries (57 % in USA)**
- **Greater Montréal Area - Software Enterprises.**

Number of employees	Number of Software Enterprises	Percentage
1 to 25	540	78 %
25 to 100	127	18 %
Over 100	26	4 %

50% of enterprises have less than 10 employees
Source: Montreal International, 2006

* OECD: Organisation for Economic Co-operation and Development

Development of International Standards for VSEs

- **Phase 1 - Recognition of Needs and Problems.**
  - Began in Australia at an ISO Plenary meeting (2004)
- **Phase 2 - Basic and Applied Research**
  - Survey of Process Improvement Initiatives (2005)
  - Survey of VSEs worldwide (2006)
- **Phase 3 - Development**
  - The Development of International Standards for VSEs (2006 - 2010)
- **Phase 4 – Commercialization (2010)**
- **Phase 5 - Diffusion and Adoption**
  - Development of the Means to Accelerate the Adoption and Utilization of International Standards by VSEs (2006 -)
- **Phase 6 - Consequences** (2010 -)

Use of SE Standards by VSEs - Hypothesis

- **Reasons for not using Standards**
  - Not written for or difficult to use by VSEs,
  - Current SE standards do not specifically address VSEs' needs,
  - Current SE standards requires critical mass (staff, budget, time) to implement,
  - Compliance with existing standards difficult to achieve,
  - Net benefit not obvious,
  - Most VSEs do not have the expertise to implement standards.

- **Benefits of Use** (but not seen by VSEs)
  - Reduction of risk (business, cost, schedule, quality),
  - Enables measurement of productivity and quality,
  - VSEs are often developing important components for customers.

Standards are often developed by large organisations for large organisations

SE = Software Engineering

Agenda
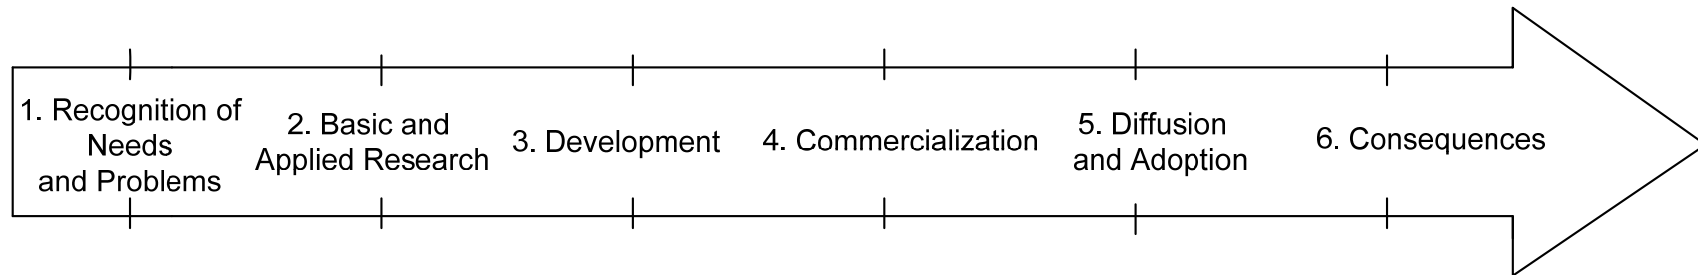

- **Phase 1 - Recognition of Needs and Problems** **(2004)**
- **Phase 2 - Basic and Applied Research**
  - Survey of Process Improvement Initiatives (2005)
  - Survey of VSEs worldwide (2006)
- **Phase 3 – Development** **(2006-2010)**
- **Phase 4 – Commercialization** **(2010)**
- **Phase 5 - Diffusion and Adoption** **(2006 -)**
- **Phase 6 - Consequences** **(2010 -)**

Initiatives to Help SMEs and VSEs

- **Europe**
  - Ireland - Centre for Software Process Technologies (CSPT)
  - Belgium - Centre d'Excellence en Technologies de l'Information et de la Communication (CETIC)
  - Ireland (LERO)
  - Luxembourg - Public Research Center Henri Tudor
  - UK – National Computing Center
  - European Software Institute
- **Australia** - Software Quality Institute (Rapid)
- **Latin Countries**
  - Mexico - Moprosoft
  - COMPETISOFT Project – 13 Latin American countries, Spain, Portugal.
  - Columbia – ParqueSoft Foundation
- **Asia**
  - Thailand - Association of Thai Software Industry
  - Hong Kong – Productivity Council
- **North America**
  - Software Productivity Center (SPC) - Vancouver
  - Software Engineering Institute - Improving Processes in Small Settings (IPSS)
Survey of VSEs

- **Objectives**
  - Identify VSEs' utilization of standards
  - Identify problems and potential solutions to help VSEs apply standards and become more capable and competitive.

- **Method**
  - Web-based Survey
  - Questionnaire translated in 9 languages
    - English, French, German, Korean, Portuguese, Russian, Spanish, Thai and Turkish.
  - Invitation to participate in survey widely broadcasted via:
    - WG 24 Network of contacts
    - Centers and initiatives focused on SMEs/VSEs
      - e.g., SIPA (Thailand), CETIC (Belgium), Parquesoft (Colombia)
    - SPINs (Software Process Improvement Network)
      - Affiliated/Sponsored by the Software Engineering Institute

Responses from 32 Countries

Country	Number of Responses	Country	Number of Responses	Country	Number of Responses
Argentina	2	Finland	13	New Zealand	1
Australia	10	France	4	Peru	4
Belgium	10	Germany	1	Russia	4
Brazil	72	India	57	South Africa	10
Bulgaria	3	Ireland	10	Spain	4
Canada	10	Italy	2	Taiwan	1
Chile	1	Japan	3	Thailand	59
Colombia	109	Korea (South)	4	Turkey	1
Czech Republic	3	Luxembourg	3	United Kingdom	2
Dominican Republic	1	Mexico	20	United States	3
Ecuador	9	Morocco	1		

435 responses

Why don't VSEs use Standards?

- Not required — 24%
- Lack of support — 9%
- Lack of resources — 28%
- Too time-consuming — 14%
- Standard(s) * — 15%
- Other — 10%

* Difficult, Bureaucratic, not enough guidance.

Requests from VSEs

- **Certification and Recognition**
  - Only 18% are certified
    - Over 53% of larger companies are certified
  - Over 74% indicated that it was important to be either recognized or certified
    - ISO certification requested by 40%.
    - Market recognition requested by 28%
    - Only 4% are interested in a national certification

- **Needs Regarding Documentation**
  - 62% are asking for more guidance and examples
  - 55% are requiring 'lightweight' standards that are easy to understand and apply and come with templates

Subset of Requirements to Develop Standards for VSEs from First Bangkok 2005 Meeting

- R08 - Use of the set of workproduct must be affordable.
  - i.e. consultant services should not be necessary.
- R15 - The set of workproduct should provide the whole spectrum of documents
  - From standards to education material
- R29 - The set of workproduct should propose to choose a lifecycle
  - Provide examples of lifecycles
- R33 - The set of workproduct should propose definition of documents.
  - For example templates (e.g. requirements templates - use cases)
- R37 - The set of workproduct should include compliance table checklists
  - e.g. an Assessment Guide
- R52 - The guide should provide examples
  - e.g. plans, workproducts and other deliverables.
- R57 - The guide should be available free on the web

Agenda

- **Phase 1 - Recognition of Needs and Problems (2004).**
- **Phase 2 - Basic and Applied Research (2005-2006)**
- **Phase 3 - Development**
    - The Development of International Standards for VSEs (2006 - 2010)
- **Phase 4 – Commercialization (2010)**
- **Phase 5 - Diffusion and Adoption (2006 -)**
- **Phase 6 - Consequences (2010 -)**

The Strategy of WG 24 to develop standards and guidelines for VSEs

- Use the notion of 'Profile' to develop a roadmap and standards to meet the needs of VSEs.
  - A profile is an '**assemblage**' from one or more base standards to accomplish a particular function.
  - A Profile Group (PG)
    - A collection of profiles which are related either by composition of processes (i.e. activities, tasks), or by capability level, or both
- Focus first on VSEs developing Generic software (Profile Group)
- Use the Mexican national standard MoProsoft as a referential to start the development of profiles
- Use two types of standards, as the input, for the development of standards for VSEs:
  - **Process standards**, such as ISO 12207, that define the activities required to achieve identified objectives or outcomes;
  - **Product standards**, such as ISO 15289, that define the structure and content of artefacts produced by the processes;
- Develop a set of documents to describe and specify the profiles

The "Generic" Profile Group

- **The "Generic" Profile Group**

  - Applicable to a vast majority of VSEs that <u>do not develop critical software *</u>.

  - Does not imply any specific <u>application domain</u>

  In the future new domain-specific profiles may be developed

  > * **<u>Critical software</u>**: software whose failure could have an <u>impact on safety</u> or could cause <u>large financial or social losses</u> (IEEE 610.12)
# A Roadmap in 4 Stages (Profiles) for Generic Software Development VSEs
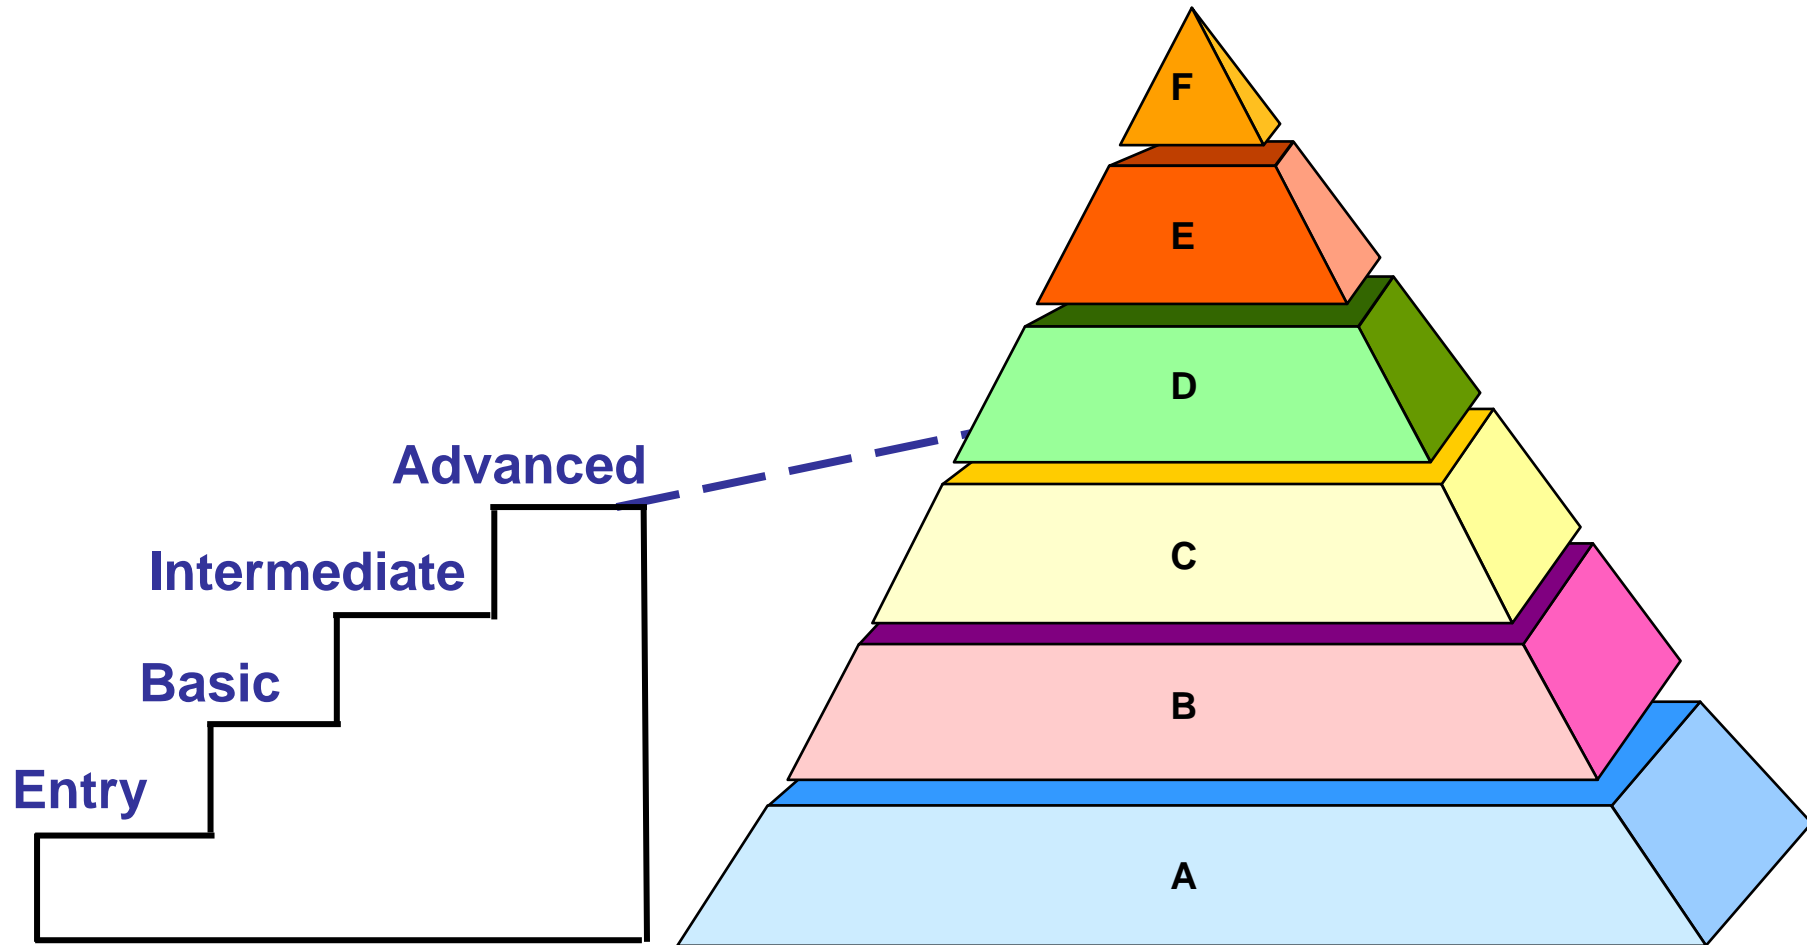

The Generic Profile Group

- **Four Profiles within the Generic Profile Group**
  - **Entry** - Targets VSEs typically developing 6 person-month projects or start-ups;
  - **Basic** - Targets VSEs developing only one project at a time;
  - **Intermediate** - Targets VSEs developing more than one project at a time;
  - **Advanced** - Targets VSEs wishing to put in place business management practices and portfolio management practices

Profile Group	Profile Name

For VSEs

'**How** to do'

ISO/IEC 29110

Obtained approval from ISO to make TRs available at no cost

Documents Targeted by Audience

- **General Documents (applicable to all profiles)**
  - **Part 1- Overview** (Technical Report)
    - Introduces the major concepts required to understand and use the suite of documents
  - **Part 2- Framework and Profile Taxonomy** (Standard)
    - Specifies the elements common to all profiles (structure, conformance, assessment) and introduces the taxonomy (catalogue) of 29110 profiles.
  - **Part 3 -Assessment Guide** (Technical Report)
    - Describes the process to follow to perform an assessment to determinate the process capabilities and the organizational process maturity
- **Documents for the first Profile (i.e. specific to one Profile)**
  - **Part 4-1 -Specifications** (Standard)
    - Provides the composition of a profile, provide normative links to the normative subset of standards
  - **Part 5-1 Management and Engineering Guide** (Technical Report)
    - Provide guidance on its implementation and use of a profile
   - Deployment Packages (DP)

Preparation Steps for the Basic Profile
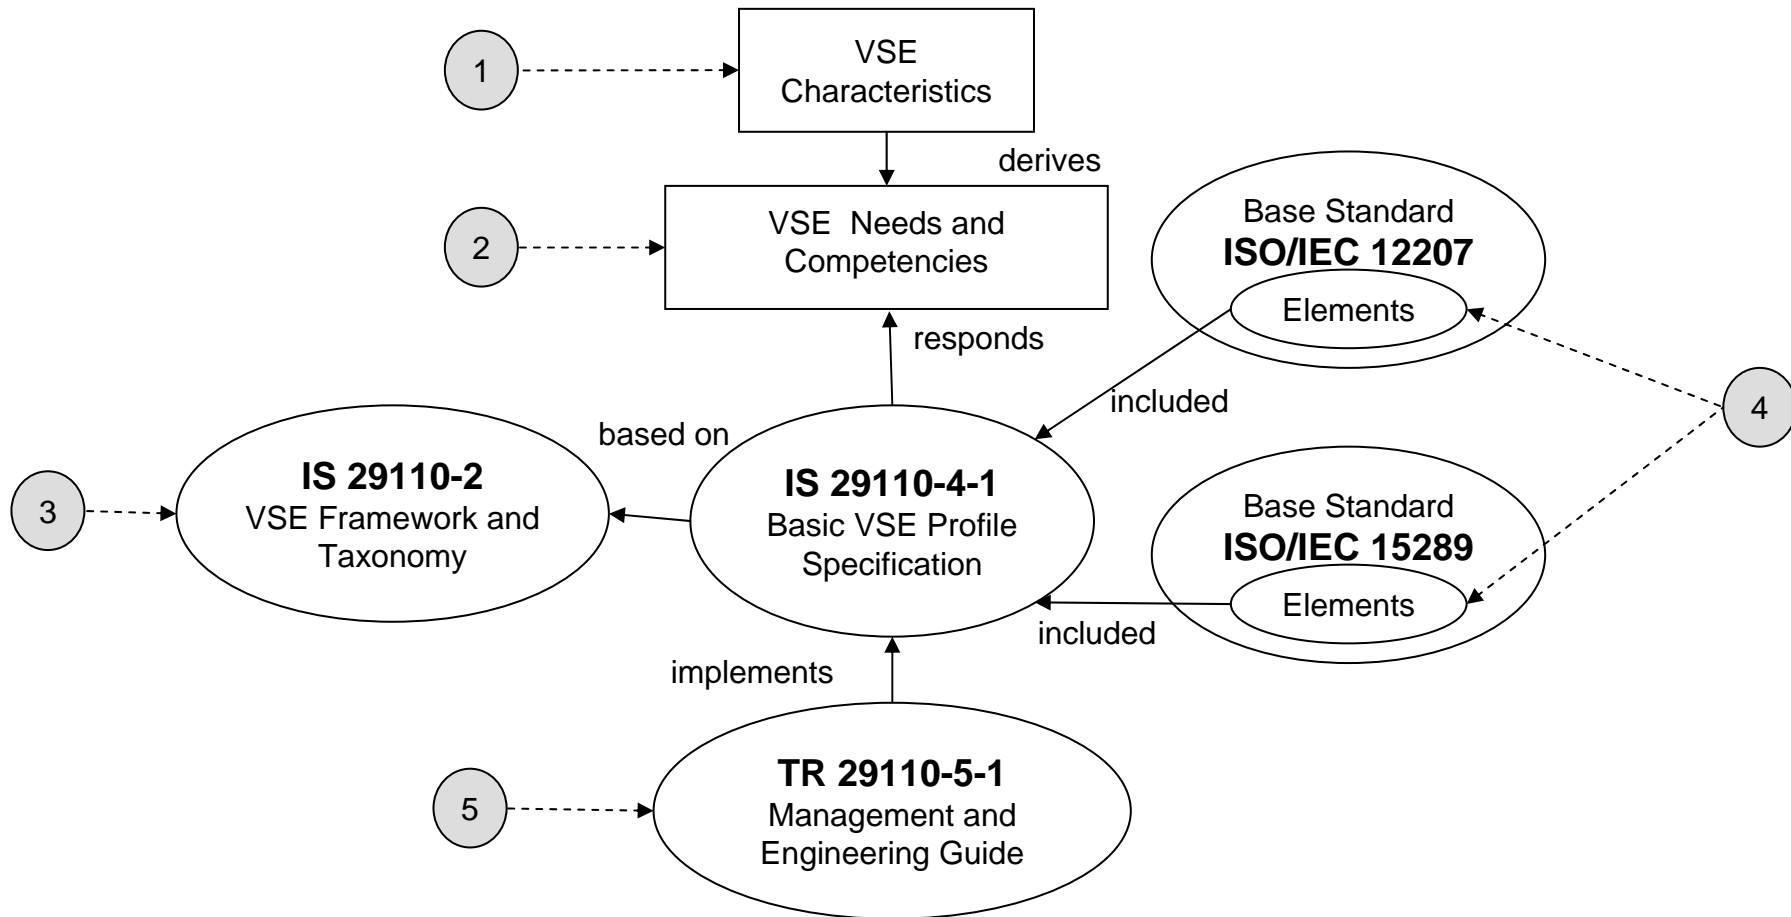

ISO/IEC 29110

ISO/IEC 29110 Part 5-1
Management and Engineering Guide

- Part 5 provides a Management and Engineering Guide for the VSE Profile described in ISO/IEC IS 29110 Part 4.

ISO/IEC 29110 Part 5 – Table of Contents

Foreword

Introduction

1. **Scope**

2. **Normative references**

3. **Terms and definitions**

4. **Basic VSE profile management and engineering guide**

   4.1 Introduction

   4.2 Project Management (PM) process

   4.3 Software Implementation (SI) process

   4.4 Roles

   4.5 Product description
   4.6 Software tools requirements

Annex A (informative) – Deployment Package
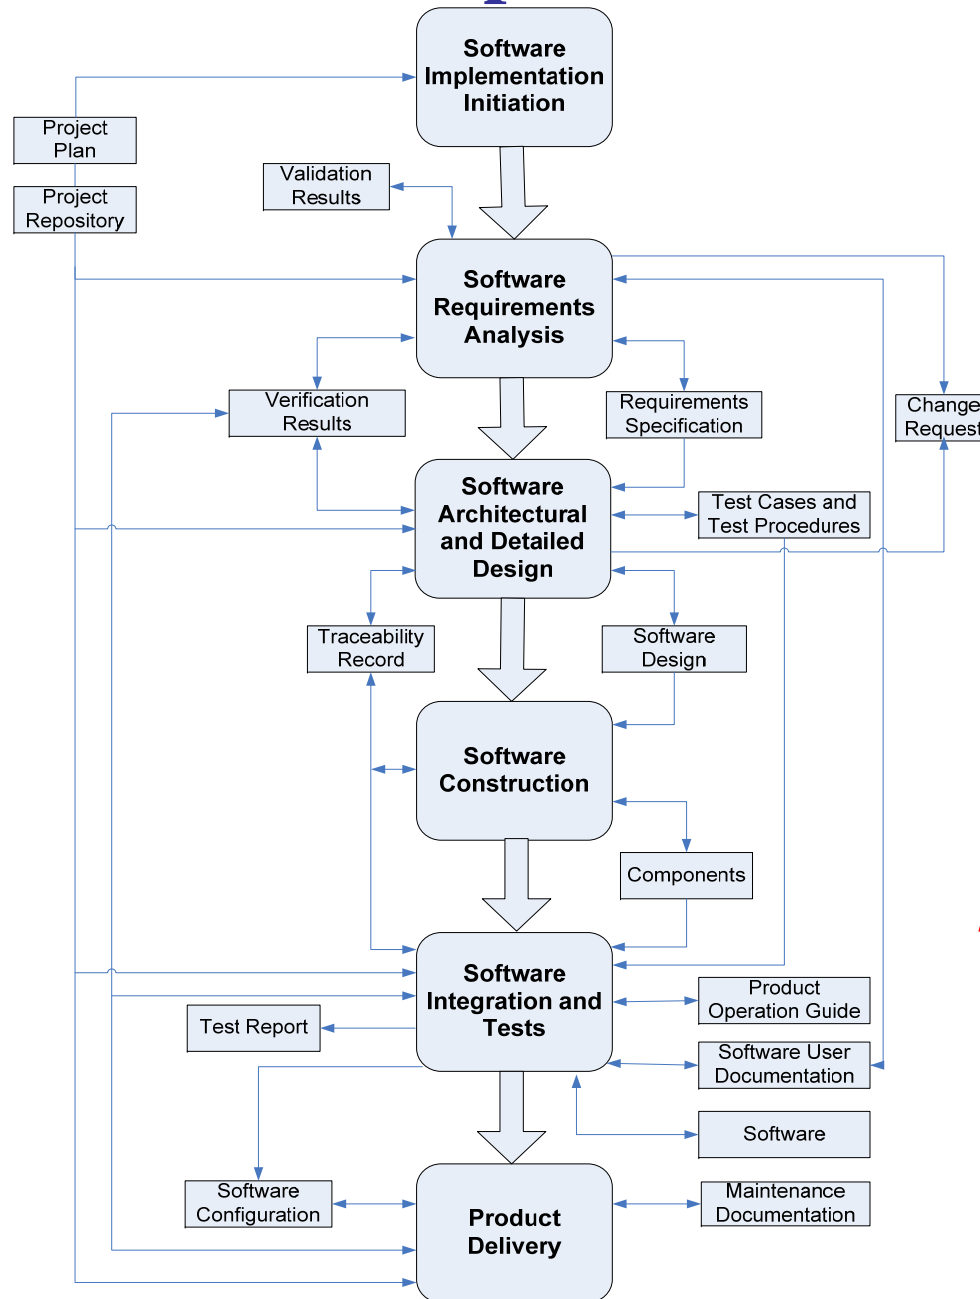

Bibliography

Publication by ISO and Diffusion/Adoption

- **Commercialization begins when ISO publishes the Standard**
  - ISO Working Groups are <u>not involved</u> in commercialization
- **Needs of VSEs (from Survey)**
  - Not completely fulfilled with ISO/IEC 29110 Part 5 - Engineering and Management Guide
  - VSEs requested readily usable processes
- **The Concept of Deployment Packages (DPs) - Moscow Meeting**
  - To accelerate diffusion and adoption worldwide
    - By providing readily usable information and made freely available
      - e.g. detailed process descriptions (steps), templates, checklists, etc.
  - Linked to ISO/IEC 29110 document
    - Part 5 - Annex A

Agenda

- **Phase 1 - Recognition of Needs and Problems (2004)**
- **Phase 2 - Basic and Applied Research (2005-2005)**
- **Phase 3 – Development (2006-2010)**
- **Phase 4 – Commercialization (2010)**
- **Phase 5 - Diffusion and Adoption (2006 -)**

Deployment Packages (DPs)

- A Deployment Package (DP) is a set of artifacts developed to facilitate the implementation of a set of practices, of the selected framework, in a VSE.

  - A deployment package is not a complete process reference model. Deployment packages are not intended to preclude or discourage the use of additional guidelines that VSEs find useful.

- By deploying and implementing a Deployment Package, a VSE can see its concrete step to achieve or demonstrate coverage to Part 5.

- Deployment Packages are designed such that a VSE can implement its content, without having to implement the complete framework at the same time.

- Each DP is reviewed and edited by at least 2 persons

  - Ana Vasquez (Mexico)
  - Claude Y Laporte (Canada)
Content of Deployment Packages

1. Technical Description
   - Purpose of this document
   - Why this topic is Important ?
2. Definitions
   - Generic Terms
   - Specific Terms
3. Relationships with ISO/IEC 29110 Part 5-1
4. Description of Processes, Activities, Tasks, Steps, Roles and Products
5. Template
6. Example
7. Checklist
8. Tool
9. Reference to Standards and Models: ISO 9001, ISO/IEC 12207, CMMI

Project Management	Ireland
Product Delivery	Canada, Thailand
Self-Assessment	Finland

- **Additional DP**: Conduct of Pilot Projects DP (Canada, Uruguay) *

http://profs.logti.etsmtl.ca/claporte/English/VSE/VSE-packages.html

Pilot Projects

- **Definition**
  - A method for exploring the value of a new technological concept via an objective study conducted in a somewhat realistic setting (adapted from Glass 1997).
- Successful pilot project is also an effective means of building adoption of new practices by members of a VSE *
- To be credible, the pilot projects should satisfy the following requirements (Fenton 1994):
  - The pilot project experiment has to be designed correctly,
  - The pilot project has to be performed in a real situation.
    - It is not a toy project, i.e. an artificial problem in an artificial situation,
  - The measurements have to be appropriate to the goals of the experiment,
  - The experiment has to be run for long enough.

> * To develop a solid business case to promote the adoption of ISO 29110 by VSEs internationally

http://profs.logti.etsmtl.ca/claporte/English/VSE/VSE-pilot.html

Select and Conduct Pilot Project Deployment Package

- **Purpose**
  - To provide tailorable and usable guidelines and materials in order to select and conduct pilot projects in VSEs.

- **Overview of the 4 Tasks**
  - Task 1 - Assess the opportunity to conduct a pilot project *
  - Task 2 - Plan the Pilot Project
  - Task 3 - Conduct the Pilot Project
  - Task 4 - Evaluate the Results of the Pilot Project

Task 1 - Assess the Opportunity to Conduct a Pilot Project

- **Goals**
  - The pilot project coordinator and the management of the VSE assess the opportunity to conduct a pilot project.
  - If the conclusion of the assessment is positive, the commitment of VSE's management to conduct the pilot project is obtained.

- **Steps**
  - Step 1: Sign the Confidentiality Agreement (optional)
  - Step 2: Define the characteristics and context of the VSE
  - Step 3: Define the problem(s) to be addressed
    - e.g. Perform an assessment using the Self-Assessment DP and tool
  - Step 4: Select the technology to pilot
  - Step 5: Select the project which will pilot the technology
  - Step 6: Examine the cost and benefits of the pilot project
  - Step 7: Obtain the commitment of VSE's management

Pilot Projects Completed in Canada

- **Pilot Project in a Computer Aided Design (CAD) Software Support Organisation**
  - Distributes and supports three types of software products:
    - Computer Aided Design, Computer Aided Manufacturing and Computer Aided Engineering.
  - Products serve mainly the aerospace and the automobile industries.
  - Defined the tasks of 4 developers and undertook to improve the following processes:
    - Project management, Software configuration management, Issue tracking and Requirements management

- **Project conducted at a School Board of the Montréal Area**
  - Provide a stimulating environment for student learning.
  - It represents 54 primary schools, 14 secondary schools, 2 general training centers and 4 vocational training centers.
    - Over 8,000 employees,
  - IT department with a staff of 4: 1 analyst and 3 developers.
  - Studied, translated and implemented 3 DPs:
    - Software Requirements, Version Control, Project Management

Pilot Projects Underway

- **Belgium (CETIC)**
  - VSE of 25 people have developed a solution for managing Tram / bus / subway tickets in Brussels.
  - Pilot project started in June with a process assessment phase aiming to identify strengths and weaknesses in development related processes.
  - CETIC is preparing, with this company, the improvement actions mainly based on the following Deployment Packages:
    - Requirement Analysis, Version Control, Project Management

- **France (UBO)**
  - VSE (ÉcoCompteur) and graduate students of the Software Engineering Master Program (with internships)
  - VSE of 14 employees: 2 IT staffs

- **Ireland (LERO)**
  - VSE of 10 people who are involved in designing software solutions for a range of business types and in addition they have created an in-house development platform.

Pilot Projects Underway in Canada - 1

- **Pilot Project 1 - Centre of Excellence in Neuromics of Université de Montréal**
  - Graduate student in Software Engineering
  - Development of a software process for a research laboratory
  - Research software allows students to perform various laboratory experiments to understand the functioning of the brain areas used for listening and recognition of sounds.
- **Pilot Project 2 - Gemalto Company**
  - Security and cryptography Company
  - Graduate student in Software Engineering
    - Manager of Embedded System Development
- **Pilot Project 3 – in 3 VSEs**
  - Will perform assessments and deployment of DPs
- **Pilot Projects 4 – in 1 VSE**
  - Senior undergraduate student in software engineering of ETS

Pilot Projects Underway in Canada - 2

- **Software Engineering Graduate students – SQA Course** *
  - **AXA Company**
    - French global insurance companies group headquartered in Paris.
    - IT staff of 11 in Montréal
    - Team of 5 students
  - **Notarius Company**
    - Support the notary profession's transition into a virtual environment
      - 3,200 notaries in Québec
    - Organisation of 70 people
    - IT staff of 8
    - Team of 3 students
  - **ESRI Canada Limited**
    - World leader in GIS (geographic information system) modeling and mapping software and technology
    - Organisation of 1000 employees
    - IT staff of 6 in Montréal
    - Team of 5 students

> * In each team, one student is a staff of the Organisation

Pilot Projects Underway in Canada - 3

- **Software Engineering Graduate students – SQA Course***
  - **Barreau du Québec (Corporation of Lawers)**
    - Team of 4 students
  - **ERPsim Lab**
    - University Research Laboratory of a Business School
    - ERP simulation (e.g. SAP)
    - Team of 4 students

* In each team, one student is a staff of the Organisation

Network of Support Centers for VSEs

- **Objectives**
  - Help accelerate the development of ISO standards for VSEs
  - Accelerate deployment of VSE Standards
  - Accelerate the development and application of Deployment Packages

- Belgium (Cetic)
- Canada (ÉTS)
- Colombia (Parquesoft)
- Finland
- France (UBO)
- Ireland (LERO)
- Luxembourg (Tudor Research Center)
- Mexico
- Thailand (Institute of Software Promotion for Industries)

Education Interest Group

- Concept: Deployment Packages for Education

- Proposed at the Hyderabad meeting (May 2009)
  - To help educators teach the future ISO standards for VSEs by developing and providing at no cost educational material,
  - To sensitize undergraduate and graduate students to the ISO standard for VSEs.

- Courses to Support ISO 29110 Standards and Technical Reports
  1. Introduction to ISO/IEC Software Engineering Standards (Ireland)
  2. Introduction to the ISO/IEC 29110 Standards, Technical Reports and Deployment Packages for VSEs (Canada)
  3. Development of a Software engineering Process using ISO/IEC 29110 TR Part 5 – Engineering and Management Guide
  4. Software Development Using ISO/IEC 29110 TR - Engineering and Management Guide (Czech Republic)
  5. Self-Assessment of an ISO/IEC 29110-Based Software Process
  6. Conduct Deployment of ISO/IEC Standard in a VSE (Canada)

http://profs.logti.etsmtl.ca/claporte/English/VSE/VSE-Education.html

Development of a Public Web Site

- **Process Asset Library**
  - An organized, indexed, searchable, and downloadable repository of process assets that is easily accessible by everyone who needs processes and process-related assets, such as Deployment Packages.
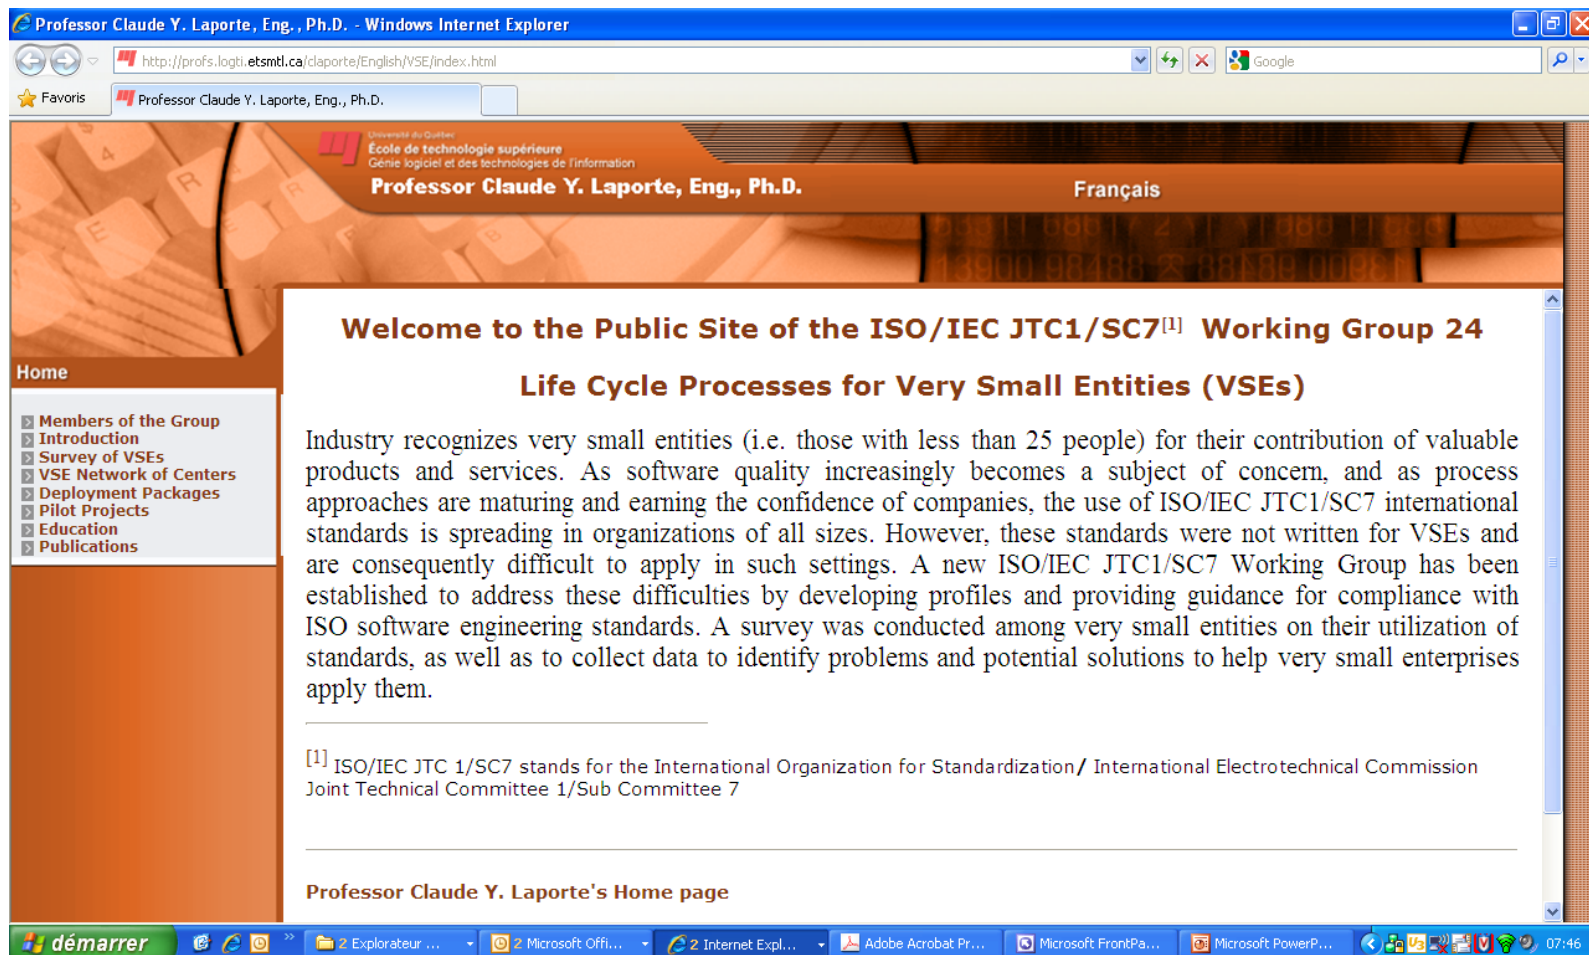

# Technology transfer center for VSEs at the ÉTS

- **Mission**
  - To accelerate technology transfer to small and very small structures in Québec developing software products or software-based systems, or to provide IT services to make them more competitive, both at the national level and internationally, by developing and deploying software engineering practices tailored to their needs.

- **Objectives**
  1. Identify, promote, and disseminate best practices in software engineering and services for very small entities;
  2. Accelerate the process of technology transfer in software engineering for VSEs;
  3. Provide information and technical and strategic information to managers of VSEs, outsourcers, and Government of Québec agencies;
  4. Participate in the development of international standards for VSEs;
  5. Promote international standards for VSEs in Québec;
  6. Promote research in software engineering for VSEs;
 7. Promote training and development courses on ISO standards for VSEs.

Agenda
- **Phase 1 - Recognition of Needs and Problems (2004)**
- **Phase 2 - Basic and Applied Research (2005-2005)**
- **Phase 3 – Development (2006-2010)**
- **Phase 4 – Commercialization (2010)**
- **Phase 5 - Diffusion and Adoption (2006 -)**
- **Phase 6 - Consequences (2010 -)**

Consequences

- Promoters of an innovation are often optimistic
  - Change agents and agencies tacitly assume that the consequences of innovations will be positive.

- Consequences of an innovation usually manifest themselves over extended periods of time (e.g. months, years)

- Possible consequences (undesirable, direct or indirect, anticipated or unanticipated) by:
  - Imposing the standards on all the VSEs in a country or on all a customer's VSEs
    - e.g. from a large enterprise or a government agency
  - Motivating VSEs to adopt the standards
    - Government support: Awareness, training, certification, etc.*
  - Not imposing the standards on VSEs (*laissez-faire*)

Next Steps

- Develop the remaining 3 profiles
  - **Entry**: six person-months effort or start-up VSEs *
  - **Intermediate**: Management of more than one project
  - **Advanced**: business management and portfolio management practices.

- Develop Profile Groups for other domains
  - Critical software: e.g. medical, aerospace
  - Game industry
  - Scientific software development
- Development of self-learning course modules to support DPs
- Development of plug-in modules (e.g. Eclipse) to support DPs
Proposed Entry Profile

- **VSEs Targeted by the Entry Profile**
  - VSEs working on small projects
    - e.g. at most six person-months effort
  - Start-up VSEs.
- **Objectives**
  - The Entry Profile could be used by recently established VSEs
    - i.e. as a 'start-up kit'
  - The Entry Profile provides a foundation for a migration to the Basic Profile.

Intermediate

Basic
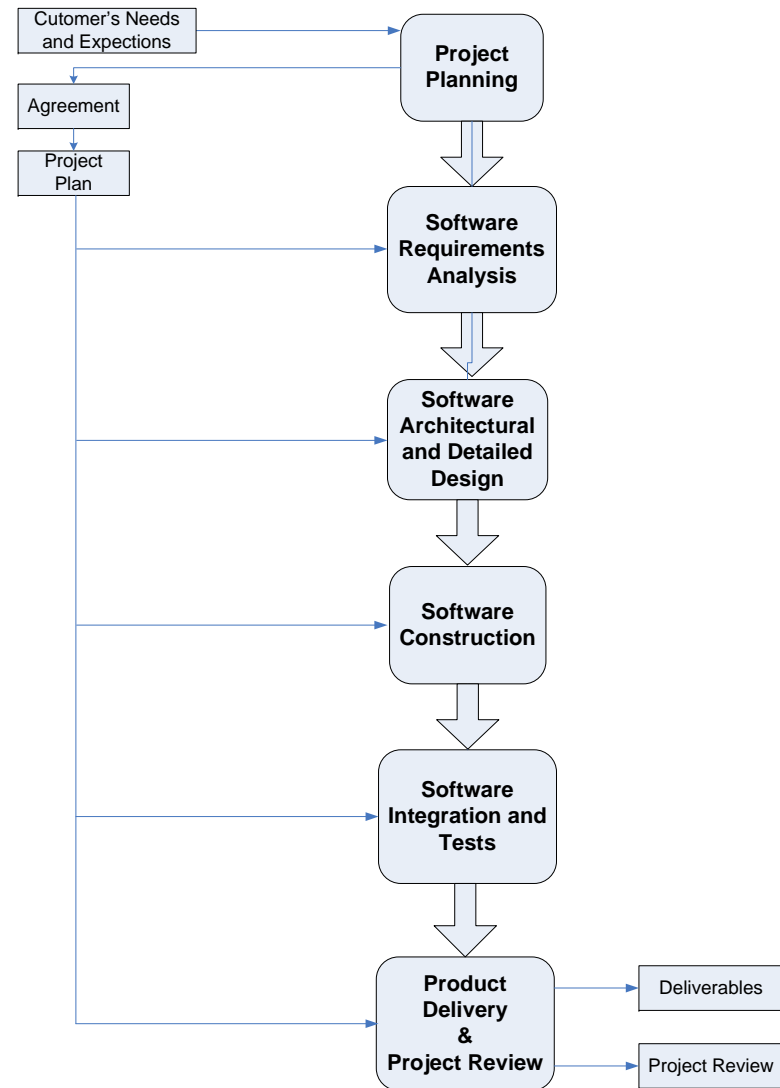

Entry

Proposed Entry Profile

- ## Processes

  - **Project Planning and Monitoring Process**

    - Develop an agreement of product to develop

    - Develop a project plan

    - Monitor project status and perform reviews

  - **Software Development Process**

    - Analyze and Document the Requirement

    - Document the Design

    - Code and Test

Intermediate and Advanced Profiles *

- **Management of more than one project**
- **Additional practices**
  - Quality assurance
  - Configuration management
  - Testing
    - Improved Integration and Acceptance testing
  - Other Practices
    - Supplier management
    - Measurement
    - Business Management
      - To help the VSE to grow its business

Entry
# Application of ISO/IEC 20000 to VSEs

- IT Service Management
  - Defines the requirements for a service provider to deliver managed services of an acceptable quality for its customer.

Service Delivery Processes

- Capacity Management
- Service Continuity and Availability Management

- Service Level Management
- Service Reporting

- Information Security Management
- Budgeting and Accounting for IT Services

Control Processes
- Configuration Management
- Change Management

Release Processes

- Release Management

Resolution Processes

- Incident Management
- Problem Management

Relationship Processes

- Business Relationship Management
- Supplier Management

- Development of Deployment Packages
  - Pilot projects

Development of Profiles and DPs in Systems Engineering

Project done under sponsorship of INCOSE/AFIS

– International Council on Systems Engineering (INCOSE)
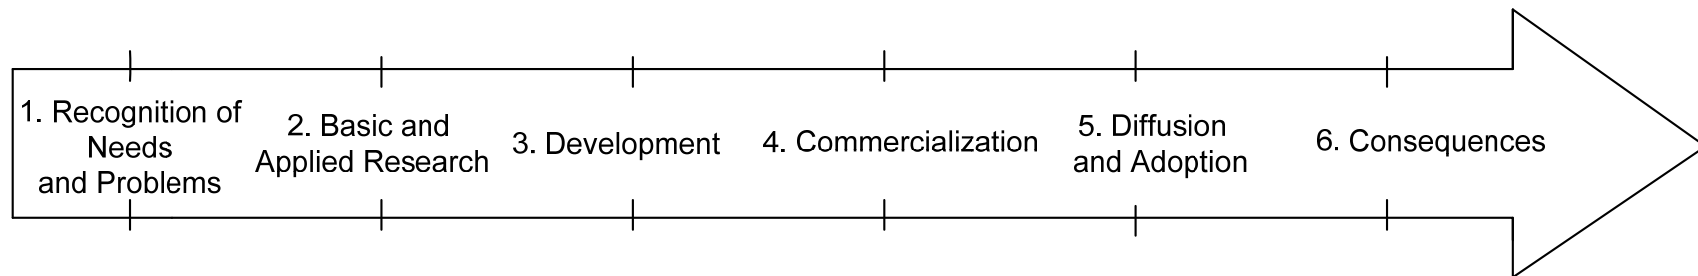

– Association Française d'ingénierie système (AFIS)

Goals

– To improve or make product development efficient by using Systems Engineering methodology

– To elaborate tailored practical guidance to apply to VSMEs in the context of prime or subcontractor, of commercial products

– To contribute to standardization

VSMEs = Very Small and Small Entities or Enterprises

Conclusion

```
┌─────────────────────────────────────────────────────────────────────────┐

```

- **Phase 1 - Recognition of Needs and Problems.**
  - Began at a meeting in Australia of an ISO meeting (2004)
- **Phase 2 - Basic and Applied Research**
  - Survey of Process Improvement Initiatives (2005)
  - Survey of VSEs worldwide (2006)
- **Phase 3 - Development**
  - The Development of International Standards for VSEs (2006 - 2010)
- **Phase 4 – Commercialization (2010)**
- **Phase 5 - Diffusion and Adoption**
  - Development of the Means to Accelerate the Adoption and Utilization of International Standards by VSEs (2006 -)
- **Phase 6 - Consequences (2010 -)**
